

SIGHTGLASS LIGHT FITTINGS

Series HL / HLM / HLMR for view and light through one assembly for application in safe areas.

- Only one assembly necessary
- Very interesting prices
- Easiest mounting
- Brilliant illumination of all kind of vessels and apparatuses
- To be delivered also as complete units VETROLUX® with sightglasses

Left:
Sightglass light fitting type HLM 80 H, mounted on screwed sightglass similar to DIN 11851, series SSA, DN 80, PN 6.

Below:
Sightglass light fitting type HL 80 H, combined with wiper of the series W, mounted on sightglass to DIN 28120, DN 80, PN 6.

Branch office / exclusive agent:

MAX MÜLLER AG

Europe's largest sightglass light fitting programme!
Perfect, thoroughly engineered solutions from one hand!
Always an interesting, technically advanced idea ahead!

Introduction and short information

General technical data

Description and mounting for series HL on sightglasses to DIN 28120

In the chemical and pharmaceutical industries, in breweries, salt works, in water treatment plants, in the food and drink industries, in the dairy industry, sugar factories, dye and paint manufacturing plants, in the soap and cosmetics industry, the problem often arises how to light out agitated vessels, holding vessels, reactors, crystallizers, distillation columns, evaporators, centrifuges, upright vessels, silos, driers and similar equipment.

The reason for this is that, regardless of automation, manufacturing processes must be checked visually, liquid levels read off and drying or fermentation processes kept under observation. In other words, it is essential to carry out visual observation, either on a routine basis or, when necessary, daily or from hour to hour. And whenever an observation or a reading must be carried out, one needs – light! This is what we provide with

our range of light fittings for sightglass application, bundled, efficient, reliable, effective even when the sightglass is caked or the substances inside the vessels are highly light absorbant.

If required, our light fittings may be used round the clock or temporarily, depending on the equipment of the light fitting chosen. If you have a lighting problem – ask the experts for advice and use for your installations products of MAX MÜLLER AG. They have been thoroughly tested, are being used throughout the world, and are both solid and safe.

Remember: Our product range has a background of 40 years' experience, research and development in sight- glass light fitting technology. Both you and your customers will benefit from this technical know-how.

Application: On sightglasses to DIN 28120 or similar of DN 50 – 200, for “view **and** light through **one** assembly”. Admitted for use in food processing industries.

Operating conditions: metaLUX® sightglass light fittings of the series HL are mounted independently of pressure or vacuum of the apparatus to be fitted on. There are no restrictions for the mounting position. With built-in push-button for momentary illumination or built-in “ON-OFF” switch (“E”) or in the version with electronic operation limitation (timer), the temperature in the connection box should not exceed 70 °C.

Electrical data:

Supply:	AC or DC
Terminal voltage:	24 V (12 V possible for several types, see page 4)
Maximum current:	4,2 A
Rating:	20 / 50 / 100 W, depending on the type (see page 4)
Bulbs:	Halogen, for sockets G4 or GY 6.35

Enclosure protection degree: IP 65 when correctly mounted

Construction and description: Housing (1) and cover (2) of corrosion resistant cast aluminium alloy, polished (on request covered by 2 components acryl based colour). Cable gland Pg 9 (3). Connection to terminals 2.5 mm². Reflector incorporated. Built-in push-button (4) for momentary illumination (on request also available without for continuous operation or with “ON-OFF”-switch “E”). Gaskets resistant against corrosion and alteration.

- **Types HL 150 H and HL 200 H also available with built-in electronic timer!**
- **Types HL 80 H up to HL 200 H may be combined with wipers of the series W / WD!**

Mounting: The exploded picture right shows the mounting of a metaLUX® light fitting on a circular sightglass. The light fitting is fixed on the upper flange by 2 or 4 bolts (see page 4). The sealing between the glass disc of the sightglass and the housing (1) of the light fitting is assured by the gasket with bridge (5), glued to the housing (1). The fixation bolts and spring washers (6), in 8.8 zinked, are contained in our delivery.

Change of bulbs: By lifting the cover (2) and demounting the bulb socket. Therefore **no** interruption of the process.

Transformers in different versions may be supplied on request. The sightglass light fittings metaLUX® may be delivered also as complete lighting units VETROLUX® for combined light and view with sightglasses (to or similar to DIN 28120 / 28121).

Short information

General technical data

Description and mounting for series HLM/HLMR on sight-glasses similar to DIN 11851

Application:	On screwed sightglasses similar to DIN 11851 of DN 65 – 125, for “view and light through one assembly”. Preferably used in pharmaceutical, cosmetic and food processing industries (dairy industries, breweries, etc).
Operating conditions:	metaLUX® sightglass light fittings of the series HLM / HLMR are mounted independently of pressure or vacuum of the apparatus to be fitted on. There are no restrictions for the mounting position. With built-in push-button for momentary illumination or built-in “ON-OFF” switch (“E”), the temperature in the connection box should not exceed 70 °C.
Electrical data:	Supply: AC or DC Terminal voltage: 24 V (12 V possible for several types, see page 4) Maximum current: 4,2 A Rating: 20 / 50 / 100 W, depending on the type (see page 4) Bulbs: Halogen, for sockets G4 or GY 6.35
Enclosure protection degree:	IP 65 when correctly mounted
Construction and description:	Housing (1) and cover (2) of corrosion resistant cast aluminium alloy, painted RAL 9001 (series HLM) or stainless steel 1.4301 (= AISI 304), polished (series HLMR). Cable gland Pg 9 (3). Connection to terminals 2.5 mm ² . Built-in reflector and push-button (4) for momentary illumination (on request also available without for continuous operation or with “ON-OFF” switch “E”). Gaskets resistant against corrosion and alteration. <ul style="list-style-type: none"> • Series HLMR made entirely of stainless steel AISI 304 • Types HLM 65 H (DN 65) up to HLM 125 H (DN 125) and HLMR 100 H (DN 100) up to HLMR 125 H (DN 125) may be combined with wipers of the series W / WD!

Materials of the screwed sightglass SSA:	Grooved collar Stainless steel nut (6): 1.4307 (= AISI 304 L) or 1.4301 (= AISI 304) Gasket with Garlock, admitted for use in bridge (5): food processing industries Glass disc (7): Sodium silicate glass to DIN 8902 (maximum operating temperature 150 °C) or borosilicate glass to DIN 7080 (maximum operating temperature 280 °C) Gasket (8): Silicone, EPDM, Viton, PTFE, Perbunan Welding 1.4404 (= AISI 316 L) or nozzle (9): 1.4307 (= AISI 304 L) On request with certificate to DIN 50049, 3.1 B AD-W2/3.1 B. Other materials on request.
---	--

Mounting: The exploded picture right shows the mounting of a metaLUX® light fitting on a screwed sightglass.
The light fitting (1) and the gasket (5) form a unit, the gasket being glued to the housing by the manufacturer. After welding of the nozzle (9) to the wall of the apparatus, the gasket (8), the glass disc (7) and the light fitting (1) are positioned as shown and fixed by screwing the grooved collar nut (6) onto the welding nozzle (9).

Change of bulbs: By lifting the cover (2) and demounting the bulb socket under full operation of the vessel. Therefore **no** interruption of the process.

Transformers: May be supplied on request in different versions.

Typical assembly (standard delivery) of a screwed illuminated light-sightglass of the series HLM(R)-SSA. (The light fitting may also be delivered as separate unit).
